

Dear Sir/Madam,

There is an **unthought, scientifically possible biological attack METHOD**, when used, it would result in **ONLY** survival of desired numbers of, mostly under 60 years old, relatively young and healthy people in each country, and elimination of everybody else!

The following method can be achieved at any time with a **MULTIVALENT, combined** mRNA and using the scientific techniques from the below patents!

STEPS of this inverted method;

First, giving immunity against an (created but **not yet spread**) extremely lethal pathogen, only to planned numbers of people,

And then, in the future, releasing that pathogen: only those who received that immunity would survive! Everybody else, including not vaccinated people, who don't have that immunity would be eliminated! In each country, **the planned number of people to survive could be determined by controlling the number of doses to be sold to that country!**

There is a way **to give that intended immunization** against a 'created but not released' lethal pathogen, **in front of the scientific scrutiny without being suspicious;** **By producing a 'multivalent' combined mRNA, encoding a chimeric spike protein which is giving immunity against that lethal pathogen!**

HOW to create the necessary logical reasons to produce an multivalent mRNA sequence with the genetic sequence portions of a (created but not released yet) lethal virus's spike protein;

As Ralph **Baric** explained in detail in his 2014 patent, [nr. US9884895B2](#), **multivalent vaccine produced chimeric spike protein will have each variant's unique mutated parts, to teach the immune system to fight against all variants.** Giving this as a reason, multivalent mRNA will be structured from mutated parts of existing variants!

Prof. [Baric has also developed a technique called](#) 'reverse genetics' in coronaviruses, which enables to engineer viruses with **DESIRED MUTATIONS** and 'mix and match parts of multiple viruses'!

So, **Scientifically it is possible** that all the variants could have been engineered, long ago, **with the exact desired unique mutated portions, so those parts to be used as reference in the construction of the next multivalent mRNA sequence!** Each variant's unique parts could actually be the common parts with the lethal version! **With this BUILDING BACK way, the intended spike protein could be encoded and that intended immunization could be given!**

For the whole scientific scrutiny, the sequence used in multivalent mRNA would be **legitimate** and just constructed from mutated parts of ..Pi, Omicron, Delta, and Beta variants.

But even if the mRNA's sequence parts will be referenced separately to existing variants, the full sequence would **encode a new shaped spike protein because of the folding conformation changes induced by mutations** as described:

<https://www.nature.com/articles/s41598-021-01650-3>

Nobody would think or know the final structure of the encoded protein was built to give immunity **also (especially)** against another pathogen!

Variants should be released every few months not only to create the reasons for the **necessity of a NEW vaccine to 'cover all variants' but especially to create the logical references to BUILD (BACK) the desired multivalent mRNA sequence!**

This is the **2003** published study of Boyd Yount, [Lisa Hensley \(U.S. Army Medical Research Institute of Infectious Diseases, Fort Detrick\)](#) known for studies on **bio weapons!** and Prof.Baric; **EXACT DESIRED nucleotide positioned (gene sequence), molecularly CLONED Sars viruses and these clones are efficiently infectious and multiplying!**

<https://www.pnas.org/content/100/22/12995>

So, any skilled scientist such as Prof. Ralph Baric, according to [his linked CV](#), (check his study on using **Coronaviruses as vaccine vector for HIV**, from 2008 to 2013) could engineer a deadly pathogen (with a modified spike protein) (also **modified not to mutate** and become resistant and erase the whole humanity) which can avoid every human defense mechanism regardless of ethnic genetic differences.

He could also engineer a few Coronavirus variants (Sars Cov-2, Beta, Delta, Omicron, Pi...) each with a bit different spike protein (those **different parts at each variant to be the COMMON part with the lethal one's spike protein!**)

I just received many replies (a few attached at the bottom) from known Professors to my question;

What does universal Coronavirus vaccine mean for mRNA vaccines;

A vaccine with only 1 combined mRNA encoding 1 chimeric spike protein having all variants mutated parts OR each vial will contain a few different (for different VOCs) mRNAs in a shot which will encode a few different spike proteins?

They all replied as; a multivalent would be produced from many sequences in a vial producing many proteins!

So, according to the scientists, One mRNA encoding One chimeric spike protein vaccine should not be the choice for a multivalent efficient mRNA vaccine! But what if they will use reasons and produce that chimeric spike! Otherwise why is Prof.Baric's lab team already testing their mixed, multiplexed ONE mRNA encoding ONE chimeric spike vaccine?

<https://www.genengnews.com/news/universal-vaccine-protects-mice-against-five-coronaviruses-neutralizes-variants/>

The method to create chimeric spike protein to be used in vaccines was patented since 2014 by the same Prof.Ralph Baric and Boyd Yount; US9884895B2;

<https://patents.google.com/patent/US9884895B2/en>

Evidence that Omicron was made in a Lab; Scientific publication on Lab mouse origin of the SARS-CoV-2 Omicron variant:

<https://www.sciencedirect.com/science/article/pii/S1673852721003738#>

NIH-Moderna sent Prof.Baric **mRNA Coronavirus vaccine to be tested in YEAR 2018!** What genetic sequence was used in that mRNA and on **which** (created) coronaviruses it was tested?

<https://www.documentcloud.org/documents/6935295-NIH-Moderna-Confidential-Agreements.html#document/p105/a568569>

Additional tools to keep alive MOSTLY younger and healthier people, at PLANNED NUMBERS in each country: It would be enough to keep this multi variant efficient vaccine away from the countries while they are still vaccinating their priority old, sick, handicap people by using the WHO vaccination priority groups (which actually **divide and placed the world population into age and health categories and gave different vaccination times**). Majority of old, sick, handicap people, also governments' authorities and personnel will already be vaccinated until the new "**universal annual booster**" will be produced and sent to those over 160 African, S.American and other Asian countries from the [second half of 2022 as the company announced](#). With this delay, the newly produced vaccines **will reach the younger and healthier part of the world's 7 billion people!** Countries which will **not** receive that vaccine, such as China, Russia, Vatikan, Iraq, Iran, Turkey, North Korea would be erased completely!

Only with mRNA technology, it is possible to immunize people secretly against another pathogen by using parts of spike protein of THAT pathogen's genetic sequence in the multivalent vaccine mRNA sequence. Parts of the produced protein to have the distinct feature and shape of the lethal virus' spike protein would be enough for our immune system to learn how to fight against the lethal one! Therefore, **any deadly pathogen with a modified coronavirus spike protein can be used in this plan. As a sample, an engineered HIV with a modified Coronavirus spike protein could infect people instantly but kill in the long term which would further cover such a plan.**

PRECAUTION for such a selective targeting, biological attack possibility not to become reality; Requesting authorities to **NOT let use of any chimeric, combined, mixed mRNA sequence**, which would encode a never existing new protein shape with no reference existing virus protein to compare with, in vaccines by explaining how it could be used in the described way! Also, requesting authorities to decide which vaccine is the most efficient and use only that vaccine on everybody! Proclaiming that 'every citizen deserves the same, best possible treatment'. Mentioning also that, 'VACCINE EQUITY' would assure **avoiding the usage of different vaccines on different age and health grouped people, to achieve the described method of a global, FUTURE biological attack, resulting in a TARGET SELECTIVE depopulation!**

I kindly ask you to verify the scientific possibility of this information with competent experts of your choice from various practice fields!

I hope I managed to explain that the whole reason for this pandemic might be to produce and inject a chimeric spike protein encoding mRNA to give protection against a future to be released, deadly pathogen to achieve not random but **a selective depopulation by keeping alive only the target number of (mostly) age and health conditions qualified people!** All the variants will be released just to create the reason to produce that multivalent mRNA vaccine!

As the top scientists explained; a spike protein can be created with the exact desired sequence and HIV can be engineered with a modified spike protein of coronavirus! THEN;

Every condition necessary to achieve such a plan are already exist: Global vaccination, Variants with unique spike protein parts, mRNA technology (which is **the only way to produce that desired Protein by a multivalent mRNA**), WHO priority groups' different vaccination times (for the right vaccine to reach to desired qualified people)

The only missing step is 'other variants to be released so to announce that “This variant is more severe and transmissible than any other variant to date and therefore current vaccines need to be updated”!) and producing a multivalent, combined mRNA in the name of a "universal FLU+ CORONA VARIANTS annual booster" (saying that we can not vaccinate the whole world population every few months)!

The usage of multivalent mRNA in vaccines leaves an open door for the described biological attack to be achieved!

This method can easily be used anytime by any terrorist groups or organizations! All it needs is modifying a HIV, Marburg... with a Chimeric Coronavirus spike protein, built of mutated parts of Omicron, Delta, Beta, Sars Cov-2.

For this risk not to exist, this information should be used legally to ADDRESS MULTIVALENT mRNA as a tool for a selective biological attack proving the claim by explaining the scientific achievability of this method!

We are now preparing for a legal action, requesting the Government NOT to use MULTIVALENT mRNA, explaining the scientific doability of the described method! To create awareness of this matter, It is necessary and urgent for similar actions to be taken in every country!

I hope I am wrong and they will not produce a multivalent mRNA vaccine and direct it to the younger part of populations through calculated delivery times to each country! Still, the method exists to achieve such a malefic plan and that's my reason for trying to make people aware of this major risk!

Kindly contact me for more details!

Thank you, Best regards,

Serdar Duzgoren <https://www.facebook.com/serdar.duzgoren/>

Below are some of the replies from SCIENTISTS to my question proves that in normal conditions a multivalent vaccine should be many sequences encoding many proteins;

From: Tseng, Chien-Te K. <sktseng@utmb.edu>
Date: Tue, Jan 18, 2022 at 5:11 PM
To: Serdar Duzgoren <sduzgoren75@gmail.com>

Would be closer to the later one (yellow-highlighted), in my opinion. However, one can certainly link all relevant mRNA together with linker to make it a bigger mRNA, instead of several separate smaller mRNAs, in a vial. Thanks for asking!

Best,

Kent

Dear Serdar,

I am not sure which context you are referring to, but it seems that a multivalent vaccine would be one encoding multiple proteins; a single mRNA active against multiple variants would be more aptly described as a broad spectrum perhaps?

Hope this helps

best regards

Alex

to me

I think it would be more likely to be the second of those two options but you should ask Pfizer or Moderna.

To: Serdar Duzgoren <sduzgoren75@gmail.com>

I think the latter: each vial will contain a few different (for different VOCs) mRNAs.

Best,
